Konecranes RTG cranes OPERATOR PANEL UPDATE

OPERATOR PANEL UPDATE FOR RTG CRANES

You might not consider the operator panel of an RTG crane a critical crane component. Nor would you think that it also might require some updating as years go by. Yet aged and obsolete operator panels could cause unpredictable and unsafe crane operations if left unchecked.

We know you want to avoid the risks

The possibility that the operator panel could cause problems increases as the RTG crane ages. After several years of intensive use, the operator panel might become blurry or damaged, making it difficult or even impossible to start and operate the crane. A damaged operator panel could cause unexpected, and potentially long-lasting downtime.

Updated operator panel for reliable crane operations

Konecranes has created a service to replace the OP27 and OP270 operator panel with a new OP277 panel. This is offered to you as a handy turn-key product. This service is now available for RTG cranes manufactured by Konecranes. The new operator panel incorporates the latest technology and has an easy, ready-to-use user interface. From the crane operator's view the user interface remains in practice the same and no special training is required after the update. The panel shows clearly and logically all the necessary information, such as fault alarms, crane and load status, load handling log as well as running hour counters.

Turn-key service by Konecranes professionals

Replacing the old operator panel with a new one will not require much time or effort. Due to Konecranes' intensive pre-engineering, the operator panel change can be carried out in a planned, efficient time frame, with minimal disruption to your daily operations. Konecranes' skilled service professionals will smoothly replace the old operator panel to an updated one as a complete turn-key service.

All you have to do is to contact Konecranes and we'll take care of the rest.

The service includes

- Software engineering
- Operator panels for the driver's cabin and the electrical room
- Installation work on site
- Commissioning
- Induction of the operator
- Disposal of old panels
- Warranty
